

January 21, 2003 – For Immediate Release

SCO and filePro...a longtime partnership

Continuing a 25 year heritage of providing high quality rapid database application development tools, fP Technologies exhibited their latest database technology at the 2003 LinuxWorld Conference & Expo in the SCO partners pavilion.

"SCO congratulates filePro on 25 years of innovation and industry leadership," said Jeff Hunsaker, VP and GM of Americas, SCO (NASDAQ: SCOX). "As a long-time SCO partner, filePro has adapted its applications to meet the demands of rock-solid operating platforms like SCO Linux, SCO OpenServer, and SCO UnixWare. Like SCO, filePro has an unrivaled commitment to their customers worldwide, which has been key to their success and longevity."

Lee Machan, Director of Marketing and Sales for fP Technologies, Inc. states that "During the last 25 years we have seen various software companies come and go, whether it be due to financial conditions or market demand, yet through this period of time filePro has continued to grow and enhance it's product line. FilePro is one of the few application development tools that will allow the VAR to write an application on one operating system and port to another without the need of re-writing the applications. Our customers and VARs can easily designed and rapidly deploy high quality applications that meet the needs of their companies and customers in a matter of hours verses days, weeks, or months". Lee continues saying "We are proud of our partnership with SCO, as many of our customers have counted on the stability and performance of SCO server products from the days of Xenix until today."

For example, Henschen & Associates of Bowling Green, Ohio has been associated with SCO and filePro for over 15 years and has the largest (178) installed court base in Ohio. Mr. Bud L. Henschen, President explains "Both filePro and SCO have given us excellent products. We have gone from installing character based "dumb terminals" to the fileProGI (graphical) product using SCO server products. We use filePro to displaying case information via the Internet and for: e-filing, e-tickets, e-payments, and to integrate photos, document imaging, word processing and other desktop applications to our products. Non-programmers can use filePro within a matter of days and filePro keeps enhancing their product so that we are current with the latest technology."

filePro Plus is used world-wide by developers requiring a powerful cost effective multi-platform tool to develop database applications in every industry imaginable. filePro is known for its ability to handle very large record and database sizes. filePro has been installed on systems with as few as a single user to hundreds of users. Supported platforms include Windows®, SCO Unix, Linux, Sun Solaris, HP-UX, and IBM's AIX and eServer iSeries Linux.

Linux and filePro maybe the solution you have been waiting for. For more information go to www.fptech.com
